Playrn Dapp

🎶 Playrn Dapp

A platform in which musicians can make drops of their music and the fans can listen to them and be rewarded with tokens that they can exchange for NFTs with different utilities like meet and greets, special merch, backstage, front row, special prices for tickets. Promote co-listenings to get additional rewards, the larger the group the bigger...

PLAYRN is a DApp that will allow musicians to drop their songs, and interact with

🐭 User

A wallet is associated with it when entering with an email or some web2 social network.

💰 Token $PLY

ERC-20 MINTEABLE token contract. (When making the mint (claim) is when you go to your wallet) The amount generated by the counter, time, is minted.

🎁 Rewards

$PLY token farming type for using the DAPP, giving rewards, following the artist, and also for listening to songs respectively.

Within the reward contract there is a formula that by being connected to more NFT's of users, the reward arrives.

The user must go through a WorldCoin validation, in order to obtain the aforementioned rewards (external interaction).

📎 Refereal link

The user earns $PLY by sharing the referral link; You have to figure out how to enter this information so that the reward contract notices it, it generates a split contract that points to this referral link, which in turn is also an NFT.

🏃 Co-listener

Canción NFT - fraccionada.

The reward continues to work even if the contract is only the reward. Listening to it together or not, does not affect. You will be warned "red flag until fix mutual reward" via back-end.

👥 Co-listener space

Usuario1 y usuario2 entran a travez de un referal link que genera el usuario que inicia este espacio y aquí se generan las recompensas.

🔷 Mixtape (curator)

Playlist curated by the owners that other users can pay to listen to.

You just need to own the fraction of the NFT (song) to be able to put it on your mixtapes. In the secondary market, the artist takes royalties from each sale.
